

Director Platforms Analytics AWS (Bigdata, Platform Analytics, AWS)

Job ID

392471BR

Apr 25, 2024

India

Summary

Location: Hyderabad Lead the vision, roadmap, architecture and platform engineering development for the enterprise-wide Analytics AWS Platform on the cloud covering the capabilities across Analytics, Data Engineering, Data Management, Platform Architecture and Security. Improve the business value of the AWS Analytics Platforms by working closely with DDIT and business partners to enable delivery of various use cases. Drive continuous platform improvements ensuring robust operations, architecture, cost efficiency and optimization.

About the Role

Your responsibilities include but not are limited to

- Lead AWS platform engineering teams to build out the enterprise wide analytics platform to support various data digital and technology Initiatives.
- Create, maintain and evangelize Point of Views and Opinions on emerging trends in life sciences, pharma industry and relevant technologies for data and analytics. Govern the overall roadmap, capabilities, tool selection and design across AWS analytics platform
- Detailed design and implement of capabilities in line with Tech Spike outcomes. Perform assessments on use cases on-boarding on to the platforms to ensure alignment to platform governance, frameworks, and principles.
- Pro-actively engage with Technology & Platform partners to jointly strive for innovation and engage in Design Partnerships
- Ensure that the delivery teams follow standard processes which includes peer reviews, formal documentation, and sign off by business. Ensure on time, within budget, compliant, secure, and quality delivery of portfolio.
- Continuous improvement to automate capabilities, simplify landscape and reduce cost. Ensure robust platform operations partnering with platform support teams.
- Lead the team members and provide thought leadership aligned with encouraged results ensuring consistency of implementation approach and alignment to applicable methodologies, processes, tools, and standards.
- Ensure alignment to ISRM, Legal, ethics and other compliance policies and procedures in defining architecture standards, patterns, and platform solutions.

Minimum Requirements

- 15+ years of IT experience in a highly qualified function such as IT Leader, in the area of Data and Analytics

with strong exposure to Platform Architecture and Engineering.

- 10+ years Analytics / Big Data experience, proven skills & experience in solution design in a highly qualified technical function and global matrix organization
- Proven track record of broad industry experience and solid understanding of complex enterprise IT landscapes and relationships as well as driving business transformations
- Experience in AWS services S3, Databricks, Snowflake, Integration and related technologies. Experience with code management tools, CI/CD, automated testing is required.
- Specialization in Pharma Domain is required and understanding of usage across the end-to-end enterprise value chain.
- Demonstrated good interpersonal skills, accountability, written and verbal communication skills, and time management aligned with Novartis Values & Behaviors; deep technical expertise and understanding of the business processes and systems. Experience in managing vendor and customer expectations and driving techno-functional discussion; understanding of the demand to sustain and project financial processes.
- A proven track record in managing successful information technology global teams that are culturally diverse in matrix organizations. Customer orientation: Demonstrable ability to communicate across various partners, including internal and external, and align with all levels of IT and business customers
- Excellent negotiation skills, experience with agile and DevOps methodology, capability to think strategically.
